

Connecting to the Internet

Before you connect to the internet you must have Internet set up on your server. This must be done by ABCS. It is only necessary to do this once. After that you should be able to connect to the internet as long as you have an account with an internet service provider. Your modem must be plugged in turned on. Your telephone line must be properly plugged into the Wall Jack port on the back of your modem. NOT THE TELEPHONE JACK! The identifications for these ports are located on the bottom of the modem.

Login as root...to a prompt..

- a. At the prompt type

startnet then press enter

This will put some information on the screen and cause the modem to start dialing.

- b. After the modem stops dialing, wait at least 60 seconds and type the following command from the

netstat -nr then press enter.

- c. This will display a list of addresses. From this list you will need to find the one that does not start with 127 or 192 or 200. Once you find this number in the list call Advantge and tell them this is the IP address they need to telnet into.
