

Scanner Does Not Stop On Quantity Field In POS

If the scanner goes down to the next line in POS instead of stopping on the quantity field and the customer wants to be able to enter the quantity by hand, go to screen 6 of the POS header screen. On the second line, change Qty Replacement from N to Y. After this change, when the customer is in the POS item entry screen and they scan an item, the cursor will still go to the next line but the customer can now just type in the new quantity, push + and then the enter key. The new quantity on the above line will then be updated.
