The battery pack must be charged for 24 hours prior to its first use. This can be done by simply inserting the two prongs into any standard North American 120V AC outlet. After the battery has charged for 24 hours, attach it to the cordless scanner by pressing it firmly in the base of the scanner until the release buttons on each side of the battery pack click. Make sure to align the prongs on the pack with the receptacles with the receptacles in the base. The scanner should beep if the battery pack is inserted correctly. Each additional charge will take 4 hours. The LED on the battery pack will be red while the battery is charging and green once the battery pack has charged. The scanner will indicate that the battery is low by flashing the yellow light on top of the scanner.

This scanner is designed to connect to any ps/2 style keyboard and keyboard port. It can be connected to an AT style keyboard or keyboard port by means of an adapter. It can be used with the following terminals:

- Serial Spot Line
- Ethernet Spotline
- Thin Client
