

Network Printer Fix

Printing files greater than 1 meg in size.

On systems that don't appear to be able to print a large report to a remote printer, (i.e., Network laser) please make the following change.

```
cd /etc [enter]  
te printcap [enter]
```

You will find a line similar to the following:

```
lp00:\: lp=/dev/ttya16:ex:sd=/usr/spool/lpd/lp00:
```

Add the argument '**mx#0:**' to the end of the line as follows:

```
lp00:\: lp=/dev/ttya16:ex:sd=/usr/spool/lpd/lp00:mx#0:
```

This fix should be a part of our standard installation.
