

Disabling a Processor

Your system can have from one to four processors. If you are needing to disable a processor on your system, you may do so by typing the following command from the prompt....

`cpuonoff -i 2` (or the number of the processor that you are wanting to disable)

To verify what you have done, type the following command and make sure that the "inactive" comment in front of the Processor Designation

`mpstat`

GRN 02/02
