

Electronic Communications Telephone Number Change

If a customer wants the telephone number changed for their electronic communications, you must first make a copy of the ph.modem file in their /work/config directory. You will make all changes there.

```
Unix 5.0 & greater
From the prompt type #
cd /abcconfigs
cp ph.modem /work/configs/
cd /work/configs
te ph.modem
(make changes & save)
```

This will prevent the program update tapes from overwriting your changes.
