

ENTERING DPT FROM MULTIUSER....TO SILENCE ALARM ON FAILED DRIVE

A. From the prompt type # cd /usr/dpt then press the enter key

B. From the prompt type # lf then press the enter key

You should see a directory called either **raidutl.mnu** or something similar!

C. From the prompt type # raidutl.mnu then press the enter key

D. Now you should be in the DPT Management Menu.....if so type

E. Just as a Note, you either have drives that have the Optimal Or Degraded Status.
Now select the "I" option to silence the alarm. If the Alarm goes off, then escape the menu and prepare your schedule for the rebuild of the degraded drive.
