

Booting System Takes you Directly into Megamgr

Problem: If when booting your system, you do not have any other option other than entering into Megamgr by pressing any key, the following scenario has happened.

You probably have a failed drive or controller

Solution: Enter into the line options **Rebuild>Select the Failed drive to rebuild**

NOTE: MAKE SURE IT SHOWS THAT THE DRIVE IS ACTUALLY FOUND. THE DRIVE COULD BE COMPLETELY FAILED AND UNABLE TO REBUILD. IF SO, WE NEED TO CHECK ON THIS.

Highlight the drive and press enter, then the F-10 to start.

When it is finished rebuilding, hit the escape key to exit and reboot. Have software support then check the Software for errors or problems.
