

RAID CARD BEEPING

If you are experiencing a “beeping” sound coming from your Raid Controller, then you will need to follow the next steps....

From the prompt type..
megamgr

Next, select the option “Configure” but do it by the VIEW ONLY option!

Your next process will be to look for a failed drive! (Note: Hope that you only have 1 that is failed}

When you have located the failed drive in question, hit the Esc key two (2) times

Next you will select the option “Options”, then select the option “ADAPTER”

Now, to silence the Beeping noise, select the “silence alarm” option

Your next step will be to Escape out to the option “Format”

You will now see your hard drives (hopefully you will see 1 “offline”), arrow right, left, up or down
To highlight the drive that is “offline”.

Once you have selected this drive, press the F10 Key to format this drive

If you have a “MIRRORED” drive setup, then you will “Rebuild” the drive and save.
