

Clearing Screen Locks on an Adwin PC

If you have lost power to your PC and you can not access your adwin screens:

Go to My Computer then double click - Left

Go to Local Disk C: then double click - Left

Go to the Adwin file folder then double click – Left

You should now be looking for scr1, scr2, scr3, etc.

You will need to delete each screen by right clicking and answer yes to send it to the recycle bin.

From this point you should be able to access your adwin screens.
