

Can not run Fenix word processor from the main console

Problem:

You can not run the Fenix word processor from the main console. When you press enter on word processor in Other Options, it flashes and takes you back to the menu. Other terminals, however are able to use the word processor.

Solution:

1. Login as root
2. Type the following command:
`cd /etc/default`
3. Type the following command:
`touch atconsole`

At this point you should be able to use the word processor from the main console.
