

IMIGIT SYSTEM LOCKUP!

Per Mark Henning 4/12/2001

If an imigit customers system locks up for any reason... the customer should automatically disable the "cold" imigit printer before anyone goes back to work. This disabling of the cold printer should allow the customer to preserve any invoices/work that the customer was doing prior to the lock up. Then contact Mark Henning so that he can look at the imigit files for corruption.
