

# Message Manager Permission Problem

```
/usr
/usr/spool
/usr/spool/mail
/usr/tmp
/usr/spool/mail
/usr/bin/mmgr
```

To see permissions type `l -d /[directory]`

You should see `drwxrwxr-x` or `drwxrwxrt`

To change permissions type `chmod 777` and the directory name  
ex: `chmod 777 /usr/tmp` and enter

The next thing to check is ownership:

```
Total 86          owner:
drwxrwxrwt       2 mmdf      mmdf          512   Nov  5 10:46   :saved
-rw-----       1 201        group        392   Mar 15 2000   andy
-rw-----       1 benf        group        392   Mar 15 2000   benf
-rw-----       1 clintb      group        393   Dec  9 15:35   clintb
-rw-----       1 davea       group        392   Dec  9 15:35   davea
-rw-----       1 gcuke       group        393   Mar 15 2000   gcuke
-rw-----       1 herb        group        392   Mar 15 2000   herb
-rw-----       1 205         group        392   Mar 15 2000   jeff
-rw-----       1 kent        group        392   Mar 15 2000   kent
-rw-----       1 root        sys         31885  Dec 14 23:30   root
-rw-----       1 uucp        uucp         620   Dec 14 23:30   uucp
-rw-----       1 200         group         0     Mar 22 2000   worf
```

Notice the owner and the group, they need to match. This would change 201 under owner to andy in the above description.

Note Owner and User will not appear above the list when typing 1 for list
