

Fixing the pty Login Problem

From the prompt on your Unix Server.....

Type # sysut

Go to " **Add a User** " and do so now

NOTE: Each Tarantella user has to have a unique login and password for accessing the Unix Server. This login and password cannot be the same as what he has at the site.

```
[F1]-Help [F2]-Menu te22068.profile L000085
.te v1.36/960531
}
}
msc && # Attempt to start multiscreen sess
      exit # Successful--exit
[ -f $HOME/.nogo ] || # Suppressing ABCS software?
      exec dbrslexe compenvi.app abcsacct
      # N--start complist and exit when
      # finished
}
[ -f $HOME/.profile2 ] && # Post-action user-specific
  . $HOME/.profile2 # Y--use it

# Vsn Date Comment
# 1.0 ? Original
# 2.0 01-01-96 Include "#d" and version information
# Support $HOME/.profile1 and $HOME/.profile2
# Support 'msc'
# 2.1 01-11-96 Support 'facetterm'
# 2.2 02-25-96 Support $HOME/.nogo to not 'exec' ABCS soft

```

Above you have the actual .profile screen of a user. To edit this file you follow these commands...

From the prompt type...

cd /usr (Now hit the enter key)

From the prompt type....

lf (Now hit the enter key! This will list your users)

From the prompt type....

cd <name of user> (Now hit the enter key! You should now see above) (the prompt /usr/name of person)

From the prompt type....

lf (Now hit the enter key! You should see .profile)

From the prompt type...

nte .profile (Now hit the enter key! Now edit the following)

As you can see above ...you have a reference to line "msc &&", continue Down this example and you will see a line that reads...

```
[ -f $HOME/.nogo ] || ## Suppressing ABCS software?.....Now
```

Insert a Line. Then starting immediately on that line, insert the following information....

```
>>>> export WSNUMBER=9999 (That is it)!
```

Now hit the F-2 Key to "X" and save

Remember: Each user profile has to have a (separate) WSNUMBER for them to utilize Tarantella.
