

# TINY TERM UPDATE

For people who are installing Tiny Term Versions which are Oct 98 or newer "NOTE"

- A. Tiny term has to have its own Home Directory File on your C Drive. You cannot allow Windows, (during installation), to put Century into your program directory (or any other file but C: /Century). This would result in a path of /Programs/Century. This is not acceptable to the software program, and the result would be that it would not work.
- B. Also, when setting up Tiny Term make sure that your dialup connection name does not have any spaces in the name setup. Example "Test Lbr" should be "Testlbr".
