

Configuring the Portservers

Turn the power to the portserver **ON**

As soon as the portserver lights up, press both the **green arrow keys** to reset to the factory defaults.

Take a Typical Wyse Terminal and change its configuration to the following

- a. Emulation=vt100
- b. Data=8
- c. Parity=none
- d. Stop Bits=1
- e. Baud Rate=9600

When completed with setup, hit the **enter** key and you should see a login

Login as a **Superuser**

Passwd of **dbps**

You should see:>

Type **set config ip=(your IP Address)**

If you have a router type **set config router=(IP Address)**

Type **set ports range=2-16 dev=prn**

Turn the portserver **off** and back **on**

You should now be able to use sysut just like any other digi product
